- Recommend form fields: 2 to 4 (check in / out, beds, submit)
- Requires custom DEV / CSS

Terms: Using Kigo Booking Widget (KBW) requires that the Client have the Kigo Core Application ([Plan 1-6](#)). The KBW can be installed independently by the client or with assistance from the Kigo Digital Marketing Services Team (Us/We). If you choose to use the Digital Marketing Services Team the cost is \$495. We will install the KBW on your site, match the color and style of the area it will be placed in. This service does require admin access to your site's Content Management System and/or access to your Web Server (via shell or FTP). Please note that we only accept HTML based websites. It is your responsibility to create a backup of the website prior to Us doing any work on the site. Site backups are strongly recommended in the event that your pre-existing design should need to be restored. We will make all reasonable efforts to blend the Kigo Booking Widget with your existing website look, but you may find ourselves unable to fit the KBW exactly to your specification, due to limited available space etc. In those cases an alternative layout will have to be determined.

While we will match the colors and header/footer of the search, detail and booking pages of the KBW, this is not a complete custom website design. If additional work outside of the scope of the Booking Widget is necessary, please order our "Best" website package.

\*We also strongly recommend doing a website backup before starting the widget installation. This backup needs to be done by the Client.
